Claim 13. (Currently amended) An optical cable having optical fibers ~~which can be accessed anywhere along the cable~~, comprising:

a closed protective sheath surrounding a cavity having in cross section two substantially perpendicular axes intersecting at the center of the cavity, each axis defining a width of the cavity, one width being wider than the other shorter width; and

at least two optical fibers positioned lengthwise in the cable and arranged such that they occupy the greater part of the cavity in the direction of the wide width but that they allow a clearance in the cavity in the direction of the shorter width of the cavity, whereby the optical fibers are accessible anywhere along the cable via the clearance in the cavity in the direction of the shorter width.
